

The quality name for stamping foil

## MAIN PRODUCTS

## Cold Foil Series

### Metallic & Holographic Flexo Cold Foil

- Suitable for applications from fine details to broad areas stamping on different substrates like coated paper, PE, PP, PET films with strong adhesion.
- More than 40 holographic patterns, customized patterns and transparent-based holographic foil are available. Strong holographic effect.
- Excellent overprintability performance as well as good transfer quality.
- Applicable for flexo printing, letterpress printing, narrow-web offset printing.
- Applicable for regular labels, shrink-sleeves labels, in-mold labels (IML) and packing boxes.

<b>FXC Regular Cold Foil</b>	■ Maximum speed up to 160m/min (Gallus ICS670), general speed at 60-100 m/min on regular flexo printing machine with silver/gold foil.
<b>FXD Double-side Cold Foil</b>	■ Can be used for shrink-sleeve labels with reversed printing & stamping application, or regular labels with double-sided metallic effect. ■ Both sides are in high-gloss metallized effect with the same colour and pattern.
<b>FXL Registered/Fresnel Lens Cold Foil</b>	■ Unique lens effect and excellent anti-counterfeiting features. Customized pattern is available. ■ Can save foil up to 30% or more according to the pattern design and good unwinding & rewinding quality.

### Metallic & Holographic Sheet-fed Offset Cold Foil

<b>OSC Sheet-fed Offset Cold Foil</b>	<ul style="list-style-type: none"> <li>■ Suitable for applications with conventional or UV glues.</li> <li>■ High speed stamping and excellent transferring quality, good for stamping with fine details, halftone and board area.</li> <li>■ Overprintable quality with high metallic gloss and good adhesion.</li> <li>■ Widely used in regular packages, tobacco packages, folding cartons, books etc.</li> </ul>
